Area of a triangle when the coordinates of vertices are given

The area of a [triangle](#), the [coordinates](#) of whose [vertices](#) are (x_1, y_1) , (x_2, y_2) and (x_3, y_3) is

$$\frac{1}{2} |x_1 (y_2 - y_3) + x_2 (y_3 - y_1) + x_3 (y_1 - y_2)|$$

Proof: Let ABC be a triangle whose vertices are A (x_1, y_1) , B (x_2, y_2) and C (x_3, y_3) . Draw AL, BM and CN perpendiculars from A, B, C on the x – axis. Clearly, ABML, ALNC and BMNC are all trapeziums.

Area of triangle = $\frac{1}{2}$ x Base x Altitude

Area of [trapezium](#) = $\frac{1}{2}(\text{Sum of parallel sides}) (\text{Distance between them})$

Area of $\triangle ABC$ = Area of trapezium ABML + Area of trapezium BMNC – Area of trapezium ALNC

$$= \frac{1}{2}(AL + BM) (ML) + \frac{1}{2} (BM + NC) (MN) - \frac{1}{2}(AL + NC) (LN)$$

$$= \frac{1}{2}(y_2 - y_1) (x_1 - x_2) + \frac{1}{2}(y_1 + y_3) (x_3 - x_1) - \frac{1}{2}(y_2 + y_3) (x_3 - x_2)$$

$$\begin{aligned}
 &= \frac{1}{2} |x_1(y_2 + y_1 - y_1 - y_3) + x_2(-y_1 - y_2 + y_2 + y_3) + x_3(y_1 + y_3 - y_2 - y_3)| \\
 &= \frac{1}{2} |x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)|
 \end{aligned}$$

Important Remarks

1. To find the area of a polygon we divide it in triangles and take numerical value of the area of each of the triangles.
2. The area of $\triangle ABC$ can also be calculated by using following steps:

Step I: Write the coordinates of the vertices A (x_1, y_1), B (x_2, y_2) and C (x_3, y_3) in three columns as shown below and augmented the coordinates of A (x_1, y_1) as fourth column.

Step II: Draw lines pointing downwards from left to right and right to left.

Step III: Compute the sum of the products of numbers at the ends of the lines pointing downwards from left to right and subtract from this sum the sum of the products of numbers at the ends of the lines pointing downward from right to left,
 $(x_1y_2 + x_2y_3 + x_3y_1) - (x_2y_1 + x_3y_2 + x_1y_3)$

Step IV: Find the absolute value of the number obtained in step III and take its half to obtain the area.

3. Three points A (x_1, y_1), B (x_2, y_2) and C (x_3, y_3) are collinear iff

Area of $\triangle ABC = 0$

$$x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2) = 0$$

Now try it yourself! Should you still need any help, [click here](#) to schedule live online session with e Tutor!

About eAge Tutoring :

eAgeTutor.com is the premium online tutoring provider. Using materials developed by highly qualified educators and leading content developers, a team of top-notch software experts, and a group of passionate educators, eAgeTutor works to ensure the success and satisfaction of all of its students.

[Contact us](#) today to learn more about our guaranteed results and discuss how we can help make the dreams of the student in your life come true!
