Languages often play a major role in one's life. There are many languages in the world which help us to communicate with each other. One such language is English, which is globally used for communication. Therefore, it is imperative to learn and understand each and every aspect of English. You might never know when it might come handy. For example, take the word Angel. Can we form any other word with the same alphabets? Yes, absolutely. It is angle. Angel-Angle are two different words having the same alphabets. These words are called as anagrams. And in today's blog we will explain more about anagrams.

## What are anagrams?

Anagram is an arrangement of letters of a word or phrase in such a way that a new word or phrase is formed. It demonstrates a skill with words and wordplay. Interesting part is you must use each and every letter of the word to form an anagram, without repetition. Basically, you can only use the letters in the word and rearrange them to form another word or phrase.
