

Modulus and the Conjugate of a Complex Number

Created: Tuesday, 22 November 2011 12:05 | Published: Tuesday, 22 November 2011 12:05 | Written by [Super User](#) | [Print](#)

Introduction

The [modulus](#) of a complex number denotes its magnitude and [conjugate](#) of a complex number is obtained by changing the sign of imaginary part of a complex number. If the imaginary part is positive we make it negative and if it is negative, we make it positive. The sign of real part doesn't change.

Let $z = a + ib$ be a complex number, then the modulus of 'z' is denoted by $|z|$ and is defined as $|z| = \sqrt{a^2 + b^2}$

For example: 1) $|5 - i| = \sqrt{5^2 + (-1)^2}$

$$= \sqrt{25 + 1}$$

$$= \sqrt{26}$$

$$2) |-3 + 4i| = \sqrt{(-3)^2 + 4^2}$$

$$= \sqrt{9 + 16}$$

$$= \sqrt{25}$$

$$= 5$$

The conjugate of a complex number $z = a + ib$ is denoted by \bar{z} and is defined as $\bar{z} = a - ib$

Clearly we can observe that $z\bar{z} = |z|^2$

Let $z = a + ib$ then $\bar{z} = a - ib$

$$z\bar{z} = (a + ib)(a - ib)$$

$$= a^2 - i^2b^2$$

$$= a^2 + b^2 \quad [i^2 = -1]$$

$$= [\sqrt{a^2 + b^2}]^2$$

$$= |z|^2$$

Properties of Modulus and conjugate of complex numbers

For any two complex numbers z_1 and z_2 , we have

$$i) \quad |z_1 z_2| = |z_1| |z_2|$$

$$ii) \quad \left| \frac{z_1}{z_2} \right| = \frac{|z_1|}{|z_2|} \quad \text{provided } |z_2| \neq 0$$

$$iii) \quad \overline{z_1 z_2} = \bar{z}_1 \bar{z}_2$$

$$iv) \quad \overline{z_1 + z_2} = \bar{z}_1 + \bar{z}_2$$

Square Root of a negative real number

We know $i^2 = -1$ and $(-i)^2 = i^2 = -1$

Hence the [square roots](#) of -1 are i, -i but the symbol $\sqrt{-1}$ mean 'i' only.

Now we can see that i and -i both are the solutions of the equation $x^2 + 1 = 0$

Similarly, $(5i)^2 = 5i^2 = 5 \times -1 = -5$

$$(-5i)^2 = 5i^2 = 5 \times -1 = -5$$

Generally, if 'a' is a positive real number, $\sqrt{-a} = \sqrt{a} \sqrt{-1} = \sqrt{a} i$

We have already learned that $\sqrt{a} \times \sqrt{b} = \sqrt{ab}$ for all positive real numbers 'a' and 'b'

We can examine this result for i^2 ,

$$i^2 = i \times i = \sqrt{-1} \times \sqrt{-1} = \sqrt{-1 \times -1} = \sqrt{1} = 1, \text{ which is a contradiction to the fact that } i^2 = -1$$

Hence $\sqrt{a} \times \sqrt{b} \neq \sqrt{ab}$ if both 'a' and 'b' are negative real numbers

If 'a' and 'b' are zero, then $\sqrt{a} \times \sqrt{b} = \sqrt{ab} = 0$

Powers of 'i'

We know that $i^2 = -1$, different [powers](#) of 'i' are given below

$$i^3 = i^2 \times i = -1 \times i = -i$$

$$i^4 = (i^2)^2 = (-1)^2 = 1$$

$$i^5 = i^4 \times i = 1 \times i = i$$

$$i^6 = i^5 \times i = i \times i = i^2 = -1 \text{ and so on.}$$

$$i^{-1} = \frac{1}{i} = \frac{1}{i} \left(\frac{i}{i} \right) = \frac{i}{i^2} = \frac{i}{-1} = -i$$

$$i^{-2} = \frac{1}{i^2} = \frac{1}{-1} = -1$$

$$i^{-3} = \frac{1}{i^3} = \frac{1}{-i} \times \frac{i}{i} = \frac{i}{i^4} = \frac{i}{1} = i$$

Also we have,

$$i^{-4} = \frac{1}{i^4} = \frac{1}{1} = 1$$

In general, for any integer k, $i^{4k} = 1$, $i^{4k+1} = i$, $i^{4k+2} = -1$, $i^{4k+3} = -i$

Identities in Complex numbers

For any two complex numbers z_1 and z_2 we have the following [identities](#)

- $(z_1 + z_2)^2 = z_1^2 + z_2^2 + 2z_1 z_2$

$$\begin{aligned} (z_1 + z_2)^2 &= (z_1 + z_2)(z_1 + z_2) \\ &= z_1^2 + z_1 z_2 + z_1 z_2 + z_2^2 \\ &= z_1^2 + 2z_1 z_2 + z_2^2 \end{aligned}$$

- $(z_1 - z_2)^2 = z_1^2 - 2z_1 z_2 + z_2^2$
- $(z_1 + z_2)^3 = z_1^3 + 3z_1^2 z_2 + 3z_1 z_2^2 + z_2^3$
- $(z_1 - z_2)^3 = z_1^3 - 3z_1^2 z_2 + 3z_1 z_2^2 - z_2^3$
- $z_1^2 - z_2^2 = (z_1 + z_2)(z_1 - z_2)$

Express in the form a + ib

1) $i^9 + i^{19}$

$$\begin{aligned}
 1) i^9 + i^{19} &= i^8 i + i^{18} i \\
 &= 1 \times i + -1 \times i \\
 &= i + -i \\
 &= 0 \\
 &= 0 + i0
 \end{aligned}$$

Now try it yourself! Should you still need any help, [click here](#) to schedule live online session with e Tutor!

About eAge Tutoring:

eAgeTutor.com is the premium online tutoring provider. Using materials developed by highly qualified educators and leading content developers, a team of top-notch software experts, and a group of passionate educators, eAgeTutor works to ensure the success and satisfaction of all of its students.

[Contact us](#) today to learn more about our tutoring programs and discuss how we can help make the dreams of the student in your life come true!
